NGC strengthens collaboration with major engineering firms

June 7th 2023

The National Gas Company of Trinidad and Tobago Limited (NGC) has signed separate Master Service Agreements (MSAs) with two major, locally operating, engineering firms – Massy Wood limited (Massy Wood) and Worley Trinidad Limited (Worley). Both MSAs will provide NGC with design engineering and project management services to support planning and implementation of strategic project initiatives. To build and leverage synergies, these services will support NGC's operations and can also be accessed by the individual companies within The NGC Group over the next three years.

Projects have always been a major focus area of NGC's business operations and as with all functional areas of operations, NGC is seeking to be on par with best practice standards. The signed MSAs will both further NGC's efforts to that end and improve the cycle time between the planning and execution phases of projects. The agreements also assure that the Company's projects will continue to be executed under the guidelines of international best practices and assurance processes, improving safety, and quality of work. The signing of these agreements signifies NGC's willingness to engage and align with key stakeholders to promote the use of locally based engineering and project management to support the vision to become an international integrated energy company.

Additionally, the services to be provided by Massy Wood and Worley, will allow NGC access to a broader suite of engineering and project management services to bolster its in-house capabilities. This will ultimately serve to improve and enhance NGC's value proposition to potential partners and support any future business opportunities for NGC to manage and execute projects. NGC views these MSAs as working examples of and its commitment to value creation opportunities by harnessing local capabilities and leveraging technical know-how to create avenues for future growth in the energy sector.

NGC President, Mark Loquan, noted: "As NGC continues to leverage and build its own project management and supply chain management capabilities, as evident from local projects with ETeck to international projects in Ghana, the company is taking steps to partner with companies that share NGC's standards and principles to deliver best-in-class projects, developing the local expertise in the process and improving our agility as the environment demands."
