NGC 2026 Undergraduate Programme

July 2, 2026

The National Gas Company of Trinidad and Tobago Limited (NGC) commenced its 2026 undergraduate programme. Over the coming weeks, 44 interns will take part in a structured programme, designed to allow these future professionals to gain real-world experience and afford them meaningful learning opportunities. From hands-on project assignments to mentorship from experienced professionals, they will be a part of Trinidad and Tobago's most important energy company — and learn what it truly means to be part of the working professional world.

In welcoming its newest cohort of students to its 2026 Undergraduate Programme, this exciting milestone reflects NGC's ongoing dedication to nurturing young talent, sharing knowledge and helping the next generation of professionals grow into the leaders of our nation. Students from a wide range of academic backgrounds are joining the programme, bringing fresh perspectives and ideas to the table. They will work side by side with technical, administrative and operational teams, putting classroom learning into practice and discovering how their skills translate into a real-time, professional environment.

And it's not just about the day-to-day work experience - the programme will also feature a series of engaging professional development sessions designed to help students grow in every dimension. Topics include financial literacy; energy conservation and sustainability; conflict resolution; workplace professionalism and interview skills — tools which they will need to step confidently into their careers.

NGC's Acting President, Edmund Subryan, told the undergraduates, "You have earned your place in this programme from a field of more than 600 applicants, and that is an achievement in itself. Over the next seven weeks, I encourage you to be curious, ask questions, challenge ideas respectfully and take advantage of every opportunity to learn. We hope you leave NGC with a deeper understanding of our role in Trinidad and Tobago's development, practical experiences that complement your studies, and a greater appreciation of the impact you can have as future leaders of our nation."

This new undergraduate programme was designed by the Board, led by Chairman Gerald Ramdeen, in collaboration with management. Upon assumption of office, the Board found that the undergraduate programme that existed, was only afforded to the children of employees of NGC. The ordinary student whose parent was not an employee of the Company, had no chance of earning an internship. This policy was disbanded by the new Board, and the internship programme was expanded to include all students with no pre-conditions.

NGC’s Chairman stated, “The undergraduate programme is one of the many changes that have been made across The NGC Group to ensure that our students understand there is a place for each of them in the energy sector of Trinidad and Tobago. Each of these young professionals is a symbol of sacrifice, hard work, discipline and dedication. We have a duty to ensure that they are transformed into the leaders of tomorrow and this programme is designed to achieve just that.”

As Trinidad and Tobago looks ahead to the opportunities and challenges of an ever-evolving energy landscape, NGC remains committed to being part of the solution — starting with our most important resource, our human capital. The Undergraduate Programme is one of the many ways NGC is investing in a talented, capable and resilient workforce ready to return Trinidad and Tobago to being the leader in energy in the Caribbean and Latin America.
